QuietSwing Sound Control Doors

Noise Barriers, LLC. QuietSwing doors are high STC doors for use in architectural and industrial applications where sound control is needed. QuietSwing doors are complete solutions including frames, magnetic seals, all hardware, and even glazing if required. Doors are factory assembled, pre-hung, and adjusted in the plant to be ready for installation. This dramatically reduces installation time and costs, and offers greater acoustical performance.

For more information please see our [Doors and Windows Website](#).

QuietLine Sound Barriers

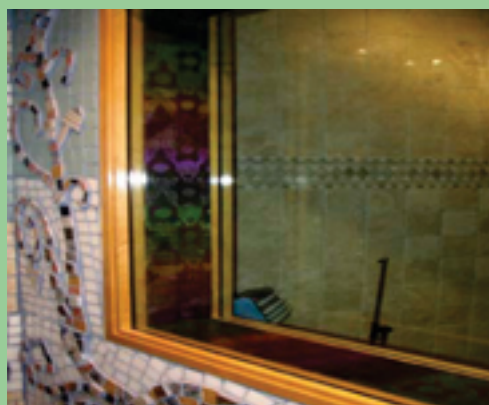

Noise Barriers, LLC. QuietLine Sound Barriers are designed to protect communities against industrial and transportation noise. With free standing and add-on capabilities, QuietLine is perfect for any application.

QuietLine Freestanding barriers optimize sound transmission loss and sound absorbing properties in a durable and attractive wall system in harmony with the community. QuietLine Ad-on panels provide maximum noise reduction with lightweight modular panels.

The barrier system is easy to install and easy to relocate. Panels and louvers are constructed of galvanized steel or aluminum and finish painted in a weather resistant polyester powder coating. The finish is also graffiti resistant and cleanable.

For more information please visit our [Barrier Website](#).

Introducing - Noise Barriers LLC

Noise Barriers LLC approaches every project in a way to reduce install variables. Their sound control doors and windows are fully factory assembled. And Noise Barriers split frame door design makes the installation that much more straightforward.

Noise Barriers barrier panels and enclosures can be designed and engineered in house, working closely with clients, so there are no surprises after shipment. Many Noise Barriers products came about due to a client's need, so don't hesitate to ask if it can be done.

Noise Barriers was formed by a group of highly motivated and experienced individuals. They provide the expanding array of noise control products and services that today's market place demands. Noise Barriers is a relatively new name in the noise control market place. However, along with that new name comes decades of experience in the noise control industry, as well as a modern, precision fabrication methodology.

Noise Barriers products are independently tested by Riverbank Acoustical Laboratories for accurate information in regards to acoustic values.

Information about Noise Barriers LLC and their products are available through West General. Please visit our website for more information on Noise Barriers [Doors](#), [Windows](#), [Barriers](#), and [Modular System](#) applications.

We thank you for being a valued customer and look forward to working with you on future projects. Please give us a call.

Sincerely,
West General
