SonexFoam-Online

Have you ever wanted a quick, simple way to access all the relevant information for a product without the hassle, popups, sidebars, menus, and, last but certainly not least, ads? We have.

That's why we developed SonexFoam-Online.com. Our in house experts have created a simple, interesting web site for exploring and reviewing the design possibilities of Pinta's Sonex acoustical foam.

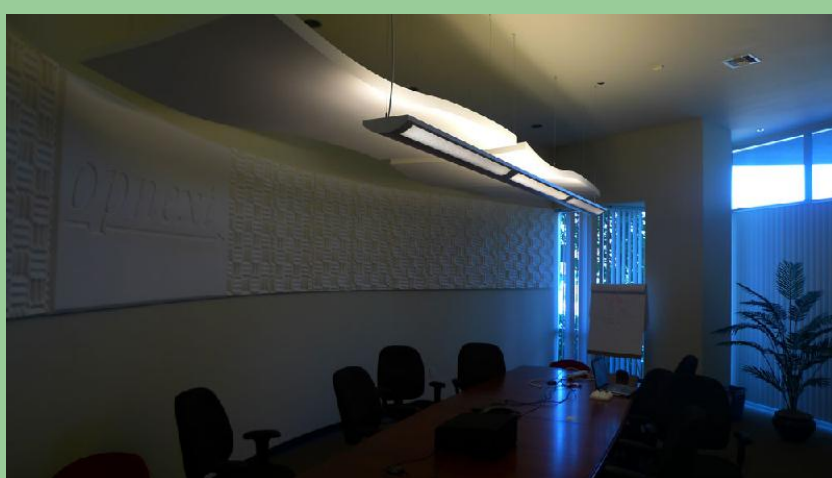

For those not familiar with the product, Sonex offers NRC values from 0.75 to 1.0, or higher. All Sonex Products have a Class 1(A) fire-rating according to ASTM E84 flame spread and smoke density test. These extremely light foam panels are easy to install, and we include instructions right on the site.

SonexFoam-online offers stunning application photos, concise, accurate product descriptions, specification sheets, cut sheets, and a contact page.

The Gallery has photos of thirty-six different applications, three for each product, to see proof of Sonex's high aesthetic value.

Check out sonexfoam-online.com, and let us know what you think.

Application: Conference Room

"West General did an outstanding job of turning an echo chamber into a usable conference room." - Rich Z/Opnext

Recently West General was contacted by OpNext, a fiber optic research company. Opnext had a conference room, with highly reflective surfaces and an oblong shape, resulting in a highly reverberant room with little to no speech intelligibility. The problem became so severe that the conference room was rarely used.

Working with OpNext and a local consultant, West General designed a solution that was aesthetically and acoustically pleasing. The design implemented Sonex One foam panels, in a band around the room. Two custom Contour panels were created, one with the OpNext Logo inscribed in it, and the other flat to be used as a projector screen. To further decrease the amount of acoustical energy in the room, four Whisperwave Ceiling Clouds were suspended above the conference table. Due to the lightweight nature of the panels, the entire installation took the contractor only half a day to complete.

As a result, the conference room has become incredibly popular requiring a waiting list to gain access.

ArtofAcoustics

ArtofAcoustics.com, by West General, is a resource for the application design of premier acoustic materials used for reverberant space treatment, and noise control. While performing their acoustic function, these materials offer a wide variety of looks and finishes. From metal and neutral colors designed into industrial applications, to soft foam, wood, and fabric colors and textures desired for schools, churches, libraries and conference rooms. Dramatic ceiling treatments, baffles, and banners that looks great in gyms, swimming pools, and large commercial spaces. Let us show you our wide range of colors, textures, patterns, and finishes, on materials which also help with your acoustics.

We thank you for being a valued customer and look forward to working with you on future projects. Please give us a call.

Sincerely,
West General
